

**Passion in Health.
Since 1988.**

Product range

Meditrade

Meditrade is a European-based global group of companies with the values of a family-run business offering comprehensive healthcare solutions under the #Passion in Health maxim.

With a legacy dating back to 1988, our journey began as a manufacturer of medical disposable gloves, caps, and masks. Meditrade has since evolved into a leading player in the European market with over 1.500 items in its product portfolio spanning gloves, protective clothing, wound care, sets and surgical accessories, incontinence products, disinfection and care products, hygiene and cleaning products, as well as stationary and patient-related supplies.

Now we leverage over 35 years of industry experience all over Europe to support healthcare professionals in delivering exceptional patient care. Our commitment to product excellence, industry expertise, streamlined logistics, as well as exceptional customer service sets us apart in the healthcare industry.

Meditrade – 35 years of innovation

Meditrade Group's history starts with the foundation of Meditrade GmbH in 1988 by Peter Rösner-Mautby, initially starting as a manufacturer of gloves to becoming one of the leading manufacturers of medical equipment in Europe. As we move forward, Meditrade Group remains steadfast in our mission to provide healthcare professionals with access to an ever-expanding range of pioneering products and solutions. Together, let us shape the future of healthcare and pave the way for a healthier and brighter tomorrow.

1988

Establishment of the company as a manufacturer of medical disposable gloves, caps & masks, and disinfection products.

BEFORE 1990

Expansion of the company through the acquisition and participation in several production companies.

1990

Meditrade is driving its global expansion in Asia by acquiring its first glove factories. With this strategic move, we gain more control over the supply chain and can offer our customers customized solutions.

2010

Expanding the product portfolio with high-quality bandages and incontinence products through the acquisition of the 90-year-old prestigious company, Karl Beese GmbH & Co. KG, located in Hamburg, which has its own production facilities.

Our product range

- Gloves
- Protective clothing
- Wound care
- Individual Sets
- Incontinence
- Disinfection and care
- Hygiene, cleaning and cleaning products
- Ward and patient accessories

2012

Relocation to the new company premises in Kiefersfelden, Germany. Since then, we have continued our successful journey in Kiefersfelden and have evolved into a leading company in the industry.

2016

Acquisition of a majority stake in the MaiMed Group.

2018

Expansion of the logistics center in Neuenkirchen, Germany, commemorating 30 years of Meditrade.

2020

Meditrade has advanced its international expansion by establishing Meditrade UK, a subsidiary based in London. Through this move, we have come closer to our customers in the United Kingdom and Ireland.

Logistics

Our approach to logistics ensures the flexible and reliable supply of our products to the entire European market.

- Main site with storage space for 20,000 pallets
- Our expanded logistics centre in Neuenkirchen offers space for 28,000 pallets
- 12.5-metre high racking with a semi-automatic picking system
- Completion of our logistics centre in Gainsborough, UK in 2024

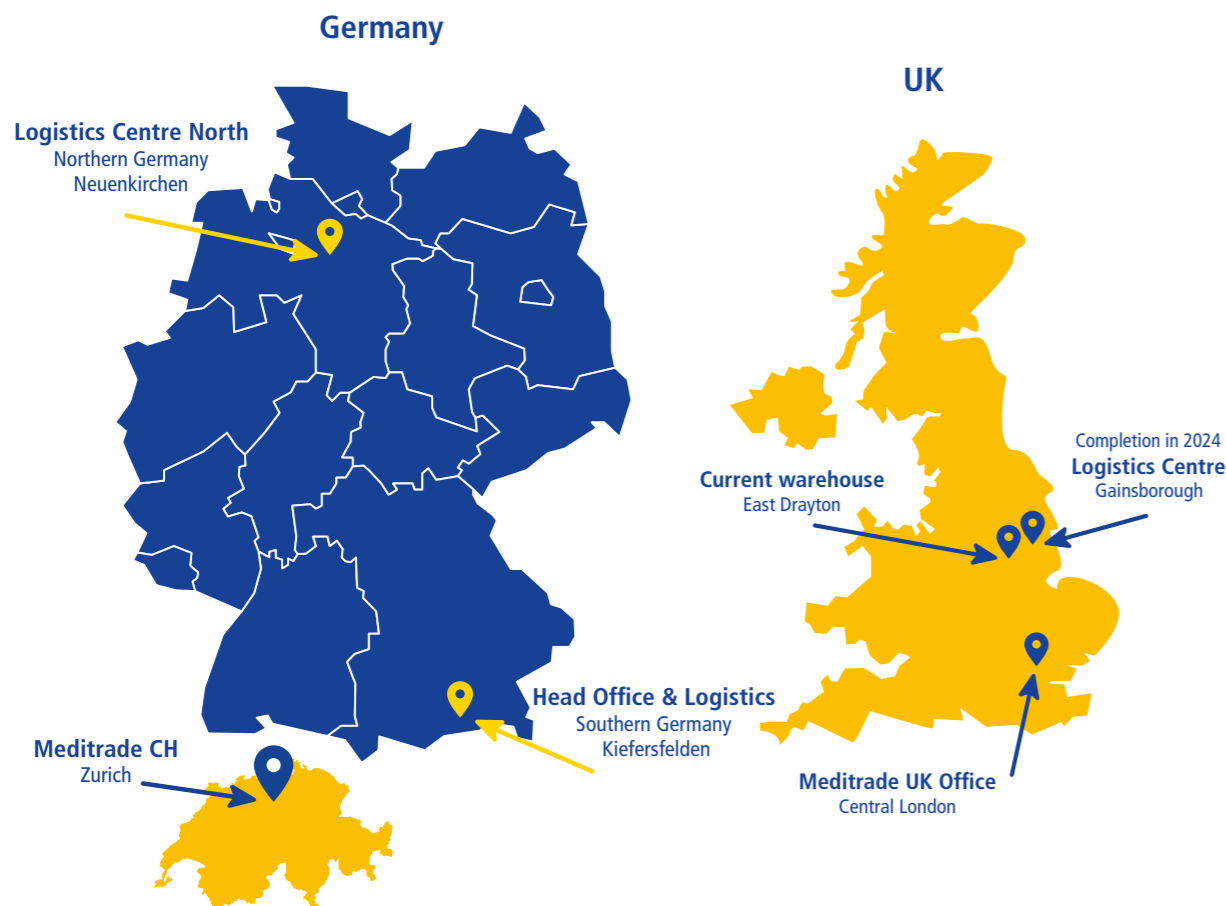

About us

- Meditrade products are manufactured in our own facilities all over the world in order to ensure the high quality of our products
- We offer a comprehensive product portfolio to supply our customers with a full range of medical consumables
- Leading provider of PPE and medical consumables in Europe, with over thirty years of experience in the industry
- A global company that stays true to the values of a family-run business
- >150 employees

We know gloves like the back of our hand

When producing our examination and surgical gloves, we at Medtrac understand that it is vital to provide gloves that combine mechanical strength with good touch sensitivity. Above all, our first priority is to protect the user and the patient, in accordance with regulatory requirements. We also invest a lot in product development know-how and in our production sites. Our huge range of latex glove models are complimented with extremely cost-effective gloves in vinyl and other alternative materials, including gloves from pure natural rubber and nitrile gloves made from nitrile butadiene rubber, ensuring we can always offer the right product for the user.

Nitril LIOX[®]

Antimicrobial examination and protective glove

Features

- Nitrile examination glove, violet-blue (DIN EN 455 standard)
- PPE Cat III (EN ISO 374, EN ISO 21420)
- powder-, protein- and latex-free
- micro-roughened
- ambidextrous, with rolled edge
- suitable for use as a food contact material

Usage

An examination and protective glove for universal use, for applications in any areas where the user is exposed to a risk of contamination. Suitable for emergency situations, rescue services and ICU staff. Suitable for highly infectious situations in hospitals and in general practice.

Benefits:

- Protects against a wide variety of hospital-acquired infections
- Kills up to 99.999% of selected microorganisms
- Skin compatibility dermatologically tested

Mechanism of action

An active dye incorporated into the outer surface of the glove material converts conventional oxygen into a compound known as singlet oxygen 1O_2 as soon as the glove material comes into contact with both light and oxygen. The highly reactive singlet oxygen attacks the cell membranes of gram-positive bacteria (including MRSA, VRE, etc.), which ultimately leads to a dying-off of the affected microbes. Singlet oxygen is already in widespread use within medicine.

Cotton glove

Soft glove from pure cotton

Features

- pure cotton glove
- air permeable
- anatomical fit

Usage

For use by skincare practitioners. Especially when treating a patient with a very greasy or slow-absorbing ointment, for example for atopic dermatitis, for very dry skin or eczema and to cover gauze dressings (avoid direct contact with open wounds!). Also usable for the reprocessing of sterilised surgical instruments. Not a medical device.

Froggy™

Hygienic glove made from soft polyethylene

Features

- transparent PE hygienic glove
- powder-, protein- and latex-free
- in a handy glove dispenser for easy removal
- welded seams
- ambidextrous

Non-sterile

Size	REF	Pack contents	Shipping unit	PZN
Small	11925	100 pcs	100 packs	06177745
Large	1192L	100 pcs	100 packs	06177751

Usage

Economical to use for simple, day-to-day activities. Suitable for protecting the hands from general environmental dirt and soiling, and applications needing to meet hygienic standards. Usable in the food industry and service stations. This PE disposable glove is not classed as personal protective equipment (PPE) in accordance with Regulation (EU) 2016/425. Not a medical device.

Latex finger cots

Non-sterile disposable product with rolled edge and a smooth surface

Features

- approved as safe for use as a short-term food contact material
- white natural latex finger cots, powder-, silicone- and thiuram-free
- only suitable for a minimal level of risk
- not suitable for activities involving hazardous, sharp-edged or aggressive materials

Usage

For covering individual fingers to insert pessaries/suppositories, apply creams or conduct simple examinations. Typically used in the healthcare, hygiene and manufacturing sectors. No medical device.

Non-sterile

Copolymed®

Sterile copolymer examination glove

Features

- sterile copolymer examination glove (DIN EN 455 standard)
- powder-, protein- and latex-free
- touch-sensitive
- ambidextrous
- pressed on paper

Usage

Suitable for short-term medical interventions, for sterile activities in the operating theatre and in wards, as well as in manufacturing. Can be used either as an underglove or an overglove if additional protection is required against soiling and fluids.

Sterile, individually packed

Our surgical gloves set the standards for protection and safety

During surgery, protecting medical staff and patients is of prime importance. The Meditrade surgical glove range includes a wide selection of glove models made from a variety of materials. Common to all gloves is their outstanding mechanical durability, thickness, grip, comfort and biological compatibility.

Reference™ OP

Powdered latex surgical glove

Features

- powdered latex surgical glove, natural (DIN EN 455 standard)
- PPE Cat III (EN ISO 374, EN ISO 21420)
- micro-roughened on the fingers
- anatomical fit modelled on natural hand posture
- left- and right-handed, with rolled edge
- packed in pairs
- sterile (ISO 11137-2 standard)

Usage

Suitable for use in all surgical areas that require sterility and anywhere where the user is working in a sterile environment with an identified risk of contamination. For highly infectious situations in hospitals, general practice, in laboratories and in the pharmaceutical industry. Also suitable for double-gloving.

Sterile, packed in pairs

Gentle Skin® Micro OP®

Touch-sensitive latex surgical glove

Features

- powder-free latex surgical glove, brown (DIN EN 455 standard)
- PPE Cat III (EN ISO 374, EN ISO 21420)
- micro-roughened on the fingers
- anatomical fit modelled on natural hand posture
- left- and right-handed, with rolled edge
- packed in pairs
- sterile (ISO 11137-2)

Usage

The surgical glove for handling demanding applications where particularly high touch sensitivity is needed. Generally suitable for use in all surgical areas that require sterility and anywhere where the user is working in a sterile environment with an identified risk of contamination. For highly infectious situations in hospitals, general practice, in laboratories and in the pharmaceutical industry. Also suitable for double-gloving.

Maxitex® UG

Surgical latex underglove

Features

- powder-free latex underglove, green (DIN EN 455 standard)
- can be combined with any primary surgical glove
- anatomical fit modelled on natural hand posture
- left- and right-handed, with rolled edge
- packed in pairs
- sterile (ISO 11137-2 standard)

Usage

As a surgical underglove for use in double-gloving for greater safety during operations. Double-gloving increases the level of protection from contamination and infection by reducing the risk of perforation. Suitable for invasive interventions, especially for high-risk patients, as well as for emergency service use and interventions with a much higher risk of pathogen transfer.

Finessis®

An innovative surgical glove programme, that reinvents

PURITY, COMFORT and REACTIVE SAFETY.

Made from **FLEXYLON™** – a high-performance elastomer

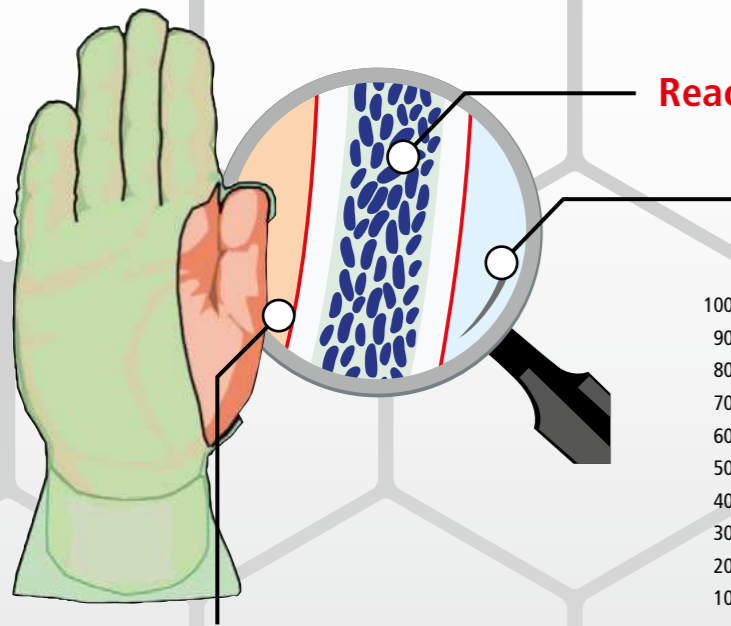

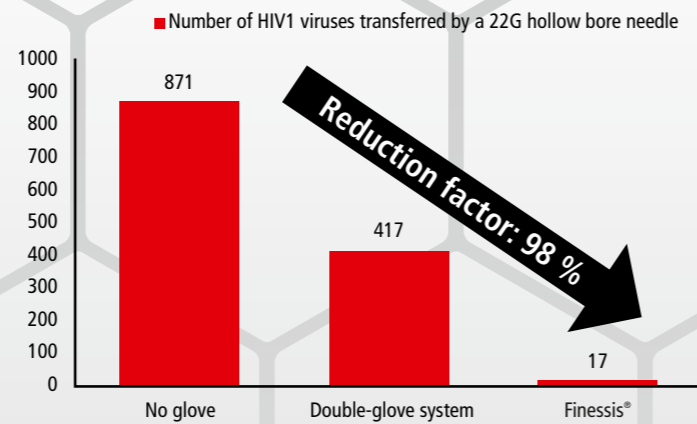

Flexylon™ is a compact poured film that contains no accelerators or cross-linkers.

This approach eliminates virtually all stitch holes and other micro-defects, thereby achieving the very highest quality standards (AQL = 0.1)!

Reactive protection

Reactive antimicrobial intermediate layer

Outer layer made from FLEXYLON™

Inner layer made from FLEXYLON™

Figure 1: A sharp object presses against the outer layer, but without breaking through.

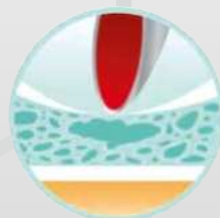

Figure 2: As pressure is increased, the thin membranes tear that separate the gel drops from one another. A larger, contiguous quantity of the antimicrobial, gel-like liquid is created.

Figure 3: As soon as the sharp object breaks through, it is enveloped by the solution and the viruses or bacteria are effectively neutralised.

Finessis®

Finessis® Aegis®

Reactive protection

Trauma and high-risk Orthopaedics

FLEXYLON™ | Without accelerators | Synthetic surgical glove

Aegis® is a revolutionary protective system. It is a surgical glove that is equipped with a reaction-triggered disinfection system. Finessis® Aegis® was designed as a glove interior featuring an antimicrobial layer between the sheath, which consists of high-performance elastomers. The disinfection system is activated and effective only IF the glove is PERFORATED. In this case, the activated gel is released in the RIGHT QUANTITY and at the EXACT LOCATION where the perforation has occurred.

Special characteristics:

- powder-free surgical glove (DIN EN 455 standard)
- PPE glove (DIN EN 374 standard)
- reaction-initiated disinfection system
- WITHOUT accelerators
- antimicrobial intermediate layer, which releases activated gel in the event of a perforation
- best AQL in the industry (AQL = 0.10)
- manufactured from FLEXYLON™ (layer technology)
- high electrical resistance
- anatomical fit

Finessis®

Finessis® Zero®

Performance and safety
General surgery

FLEXYLON™ | Without accelerators | Synthetic surgical glove

Finessis® Zero® is the next generation of surgical gloves that are manufactured without any accelerators to achieve a new level of PURITY. By using FLEXYLON™ layer technology, the risk of a type I skin allergy is completely eliminated and the risk of a type IV skin allergy is reduced to a previously unattainable minimum.

Special characteristics:

- powder-free surgical glove (DIN EN 455)
- PPE glove (DIN EN 374)
- NO accelerators
- best AQL in the industry (AQL = 0.10)
- manufactured from FLEXYLON™ (layer technology)
- high electrical resistance
- anatomical fit

Finessis®

Finessis® Corium®

Microsurgery and underglove

FLEXYLON™ | Without accelerators | Synthetic surgical glove

Finessis® Corium® is the glove with a high tactility for double-gloving and microsurgery. The glove was developed to ensure improved touch sensitivity. Corium® works as an underglove, to achieve optimal comfort without losing grip or traction. When combined with the Finessis® Zero® for the perfect fit, the Finessis® double-gloving system presents an impermeable barrier for any surgical application.

Special characteristics:

- powder-free surgical glove (DIN EN 455)
- PPE glove (DIN EN 374)
- NO accelerators
- best AQL in the industry (AQL = 0.10)
- manufactured from FLEXYLON™ (layer technology)

Finessis®

Improving safety in operating theatres and wards

Features of Suavel® surgical masks

Improving safety in operating theatres and wards

Our products make an important contribution to stopping infection pathways and the transmission of germs. Personnel, patients and visitors should feel safe and comfortable as they interact with each other. Wearer comfort, breathability and an adjustable fit are important aspects for suitable clothing.

For protective clothing in particular, it is not enough to simply rely on general or universal products: instead, clothing needs to meet the high standards in the medical field. When making Suavel face masks, for example, our techniques include an ultrasonic sealing method that prevents stitches coming loose in the final garment.

* Suavel Antifluid: 4-ply

Suavel® Protec Plus

Surgical mask with elastic ear loops, made in Germany

Features

- Type II/II R surgical mask (EN 14683 standard)
- bacterial filter efficiency $\geq 98\%$
- 3-ply, green or white exterior
- elastic ear loops
- cool and hypoallergenic
- disposable
- non-sterile

Usage

The masks are used for the protection of patients from contamination. Wearing the masks by the user, patient or other persons, reduces the spread and/or cross contamination of germs and/or other infectious materials.

Non-sterile

Wound treatment and dressings – the pillars that shoulder the weight of medical care

Alongside our wound dressings, we aim to offer the ideal range of products to treat every type of wound at each stage of recovery. After all, a wound dressing alone cannot hope to satisfy every aspect or goal for treatment.

Our product range includes all non-sterile and sterile gauze/non-woven swabs as well as absorbent dressing pads. In the field of therapeutic dressings, we aim to offer a comprehensive set of products for an array of applications that include dressing, supporting, and relieving the wound.

Patient safety is at the forefront of everything we do, and all our sterile products are fully compliant with the relevant safety standards. Features here include woven-in x-ray contrast threads and the counting check card.

BeeSana[®] Gauze cutting

For individual wound coverings

Features

- pre-cut gauze (EN 14079 standard)
- 20-thread
- absorbent

Usage

For individual wound covering applications. For the external wound care of exuding and/or contaminated wounds. For blood and exudate absorption.

Non-sterile

ABE® drainal

Slit/hole dressing pad with metallic coating

Features

- non-woven slit dressing pad with hole
- metallic coating lessens the risk of the material adhering to the wound
- hole diameter: 5.5–11 mm (approx.)

Usage

For external wound care with drainage tubes and infusion catheters. Place the metallic coating against the skin.

Single sterile, pack of 1 pc.

REF	Size (width x length)	Pack contents	Shipping unit	PZN
4118	6 x 7 cm (approx.)	50 x 1 pc.	6 packs	01333867

ABE® tracheal

Slit/hole dressing pads with metal coating

Features

- non-woven slit dressing pad with hole
- metallic coating lessens the risk of the material adhering to the wound
- sterile packed
- hole diameter: 13–30 mm (approx.)

Usage

Slit/hole dressing pad for would care with catheters, stomata and drainage tubes. The hole in the pad also has a slit, so the ABE® Tracheal can create a perfect seal around a drainage tube or stoma, and the exudate can be quickly absorbed by the the non-woven dressing pad. Place the metallic coating against the skin.

Single sterile, pack of 1 pc.

REF	Size (width x length)	Pack contents	Shipping unit	PZN
4119	8 x 10 cm (approx.)	50 x 1 pc.	6 packs	–

BeeSana® Absorbent dressing pad

Absorbent pad for superior fluid absorption

Features

- wound-friendly absorbent dressing pad
- absorbent core made from 100% cellulose
- fully enveloped in non-woven material
- blue top surface for identifying the reverse side and as a hydrophobic barrier layer to avoid soaking through, and protect underwear and clothing from contamination

Usage

For wound care of exuding wounds in all areas of health-care. Absorbent dressing pads are also ideal for padding wounds.

Non-sterile, in polybag

BeeSana[®] SafeCut

Self-adhering finger bandage

Features

- self-adhering, elastic fixation bandage
- fine latex coating prevents slippage
- stretches by approx. 100%

Usage

For personal first aid for finger and joint injuries, and for torn fingernails. For fixing wound coverings, and for use as a light support and compression bandage. For immobilising injured parts of the body and limbs.

Non-sterile

REF	Size (width x length, stretched)	Colour	Pack contents	Shipping unit	PZN
1844	2.5 cm x 4.5 m (approx.)	Blue	1 pc.	252 packs	10544882

Fold the support pad (fixation possible with or without pad)

1. Fold the end of the bandage over itself a few times until the support pad created is adequate.
2. Fix the support pad onto the intended location with the rest of the bandage until the bandage is stable enough.
3. Apply the bandage firmly and then tear off.

ABE[®] gauze bandage

Traditional fixing bandage

Features

- rigid gauze bandage (DIN 61631 standard)
- smooth structure
- woven edges
- 65% viscose/35% cotton

Usage

Broad field of use for medical applications, e.g. as an emergency bandage for first aid or as a carrier material for zinc paste bandages.

Non-sterile

ABE® universal

Permanently-elastic, medium-stretch compression bandage

Features

- permanently elastic bandage for medium compression
- open, air-permeable structure
- fully stretched length: approx. 5 m
- latex-free
- 67% cotton/30% polyester/3% elastane

Usage

For bandages where medium compression is required, and especially for compressive wound bandages. For fixing wound coverings. For immobilising injured parts of the body and limbs, and for supporting and relieving pressure on limbs.

Non-sterile

ABE[®] tubular bandage

Tubular support bandage for universal use

Features

- tube bandage made from 100% cotton
- stretches lengthways and widthways
- easy to use
- can be cut anywhere to fit
- seamless to avoid creating pressure points

Usage

As a pressure-free bandage and an underlay or overlay to protect the skin for zinc paste/plaster bandages. For immobilising and traction bandages. As an overlay for splints.

Non-sterile

ABE[®] tubular net bandage

Elastic tubular net bandage for universal use

Features

- elastic tube bandage
- simple to use
- can be cut anywhere to fit
- binding prevents bandage unravelling further
- seamless to avoid creating pressure points
- follows anatomical contours to ensure a good fit

Usage

For fixing bandages and padding materials. Scissors can be used to cut a hole in the mesh material, so as to permit patients to exclude parts of the body (such as the thumb with a hand bandage) from being wrapped in the bandage. Suitable for use on joints, tapered and rounded body parts.

Non-sterile

BeeSana[®] Sets – extremely cost-effective yet offering maximum customisation

Our set solutions offer a wide range of combinations of components in a single pack enabling our clients to use our products safely and efficiently. Material use, preparation time, waste volume and logistics costs are all reduced with our sets that come in a wide range of individual components ensuring high quality patient care. All components are ready for use in the amount precisely allocated to the patient and procedure concerned.

Of course, all our sets for the operating theatre are fitted with double, self-adhesive counting cards to ensure reliable recording of the details in the patient files. The use of set solutions leads to an optimisation of process and great costeffectiveness for the client. Set solutions are available both as prefabricated standard sets and as bespoke sets put together according to the client's wishes.

Bespoke set solutions

The contents of each set are put together according to the specific requirements of our clients. Our trained and competent sales staff work with our clients to understand the requirements for special procedures and come up with tailored solutions to meet the highest demands. Clients can draw from our entire product range, comprising bandages, coverings, protective clothing and other materials.

Standardised set solutions

Given our years of experience in creating bespoke set solutions for our clients, we have been able to develop a range of standard sets for various procedures both in the operating theatre and in the ward. Combinations that have been specially adapted to the requirements of various procedures make it easier for our clients to prepare and carry out standard procedures.

BeeSana® Ward catheter set

Features

The ward catheter set is used for hygienic intermittent bladder catheterisation and is sterile, to enable immediate use on the ward.

Usage

For bladder catheterisation.

Sterile

Our incontinence products are designed to ensure quality of life for patients

A variety of conservative and surgical treatments are now available to cure or at least alleviate urinary and faecal incontinence. In cases where patients can no longer be treated, modern incontinence products provide a solution. When developing and producing Meditrade incontinence products, we strive to achieve well-designed, ergonomic solutions that provide discretion for the user.

Our comprehensive range of products enables cost-effective use with a wide range of sizes, absorbency levels and qualities, always following the principle of achieving targeted and acceptable patient care.

Superslip®

Anatomically shaped incontinence briefs with flexible waist

Features

Incontinence briefs with high liquid absorption, elastic back closure and double hook-and-pile fastener. Hydrophobic side seams and a dampness indicator to show when it's time to change.

Usage

For urinary and faecal incontinence, and for people requiring all-round care with reduced mobility.

BeeSana® Absorbent cushion

Pad for incontinence and nursing care

Features

Latex-free absorbent cushion from cellulose flock with non-woven sleeve and outer film. This super-absorbent material protects underwear and clothing from soiling. Simple to apply in combination with Light or Panty fixation briefs.

Usage

For incontinence/loose stools, for catheter wearers, bed-ridden and mobile patients. For use as a universal absorbent cushion in nursing care.

	REF	Size	Pack	Pack contents	PZN
Without adhesive strip	2024	18 x 40 cm	60 pcs	3 packs	02214165

Superform®

Anatomically formed incontinence pad with double cushion

Features

Incontinence pad with anatomical fit. Hydrophobic side seams as a leak barrier and a dampness indicator to show when it's time to change.

Usage

Suitable for both bed-bound and mobile incontinence patients.

Note on product combination: To fix the pad in place, we recommend using our washable fixation briefs, PANTY or LIGHT.

Layered undersheet

An industry-standard undersheet for meeting patient needs

Features

Undersheet with absorbent core made from environmentally friendly, 100% non-bleached recycled cellulose for fluid absorption. The dry non-woven material with outer film makes use easy in any situation.

Usage

For live-in nursing, undersheets help to make nursing easier by simplifying day-to-day care work and, last but not least, reducing the 'laundry mountain' by protecting the bed covers. We can supply the sheets as layered or flock undersheets in a range of different qualities.

Undersheet with absorbent core made from cellulose flock for fluid absorption. The dry non-woven material with outer film makes use easy in any situation.

Usage

For live-in nursing, undersheets help to make nursing easier by simplifying day-to-day care work and, last but not least, reducing the 'laundry mountain' by protecting the bed covers. We can supply the sheets as layered or flock undersheets in a range of different qualities.

Disinfection and hygiene products with a broad spectrum of action

The core elements of our broad range of products reduce the risk of infection, standardise prevention methods and provide lasting skin care. Please note: Our product recommendations are based on scientific testing and are offered according to the best of our knowledge. More detailed recommendations – such as in terms of material compatibility – can only be provided separately.

Our recommendations do not exempt our customers from testing our products independently to ensure they are suitable for the intended purposes and procedures. We cannot, therefore, assume any liability.

Ethasept®

Alcohol-based hand sanitiser

Product type

Ethasept® is a ready-to-use, alcohol-based, hypoallergenic disinfectant without perfumes or colourings, and is suitable for disinfection applications in human hygiene.

Applications

For hygienic and surgical hand disinfection in all areas of human hygiene.

Usage

Clean heavily soiled hands before disinfection and let wet hands dry before starting disinfection. Ready-to-use. Keeps hands/forearms moist during application. Observe standard procedures for hygienic (EN 1500) and surgical (EN 12791) hand disinfection.

Product properties

- fast-acting and broad-spectrum, works after just 15 s
- an effective bactericide, yeasticide, tuberculocide and virucide
- effective against MRSA
- dermatologically tested: "Excellent"
- listed by the German Association for Applied Hygiene (VAH)

Shelf life

3 years (see label). Shelf life after breaking seal: 12 months. Keep containers tightly closed. Warehousing and storage under standard storage conditions (protect from moisture, direct sunlight, heat and frost).

Composition

Active substance in 100 g: 73.5 g ethanol.

Regulatory requirements

Ethasept® is not a medicinal product and is subject to biocide legislation. Use biocides safely. Always read the label and product information before use.

Type 1 biocide product ("biocide products for human hygiene"), biocide reg. no. N-44236.

Ethasept® gel

Hand disinfection

Composition

73.5g Ethanol Ethasept Gel is ready-to-use alcohol-based hand sanitiser gel for hygienic hand disinfection.

Product Type

Ethasept® gel is a ready-to-use, alcohol-based, hypoallergenic disinfectant without perfumes or colourings.

Application

Ready-to-use. Thoroughly rub hands with at least 2 x 3 ml onto the hands during 60 seconds, undiluted and without adding water. Observe standard methods for hygienic hand disinfection (EN 1500).

Product properties

- Works quickly and comprehensively after just 60 seconds.
- Bactericidal, yeasticidal and limited virucidal activity
- Effective against MRSA
- Dermatologically tested and rated "Excellent"
- Listed by the German Association for Applied Hygiene (VAH)

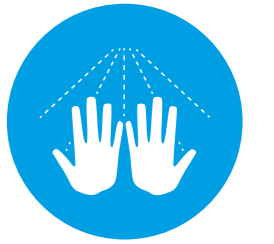

Shelf life

3 years (see label). Shelf life after breaking seal: 12 months. Keep containers tightly closed. Warehousing and storage under standard storage conditions (protect from moisture, direct sunlight, heat and frost).

Regulatory requirements

Alcoman® +

Hand disinfectant

Product type

Ready-to-use, alcoholic antiseptic for hygienic and surgical hand disinfection. Very good skin compatibility. Particularly suitable for frequent use. Dermatologically tested. Acts quickly and comprehensively.

Application

For hygienic hand disinfection, rub 3 ml portions onto the hands to keep them moist for 30 seconds. For surgical hand disinfection, rub 3 ml portions repeatedly into the hands so that the entire palm is wet for 90 seconds. Ensure that the hands are completely wetted for the entire exposure time.

Product properties

- for hygienic and surgical hand disinfection
- limited virucidal PLUS efficacy
- VAH listed

Regulatory requirements

Alcoman® + is not a medicinal product and is subject to the Biocidal Products Directive. Use biocides with care. Always read the label and product information before use. Biocide of product type 1 („Biocidal products for human hygiene“)

Shelf life

Shelf life: 3 years (see printed label). Shelf life after opening: 12 months. Keep container tightly closed. Storage and storage under standard storage conditions (protect from moisture, direct sunlight, heat and frost).

Composition:

Active ingredients in 100 g: 70 ml 2-propanol

Application: Concentration / exposure time:

Alcoman® Gel

Hand disinfectant

Product type

Alcoman® Gel is a ready-to-use, alcohol-based rub-in preparation for hygienic hand disinfection. It is used without the addition of water. Ideal for on the go.

Areas of application

For all areas with high hand hygiene requirements: clinics, doctors' surgeries, outpatient clinics, care facilities, industrial, commercial and laboratory areas.

Application

Ready to use. For hygienic hand disinfection in accordance with DIN EN 1500, rub in thoroughly for at least 3 ml for 30 seconds, undiluted and without adding water. For professional use only.

Product properties

- Bactericidal, levurocidal and limited virucidal effect
- Dermatologically tested: „very good“
- VAH-listed

Shelf life

3 years (see label printing). Shelf life after opening: 12 months. Keep containers tightly closed. well closed. Store under standard storage conditions (protection from moisture, direct sunlight, heat and frost), direct sunlight, heat and frost).

Composition

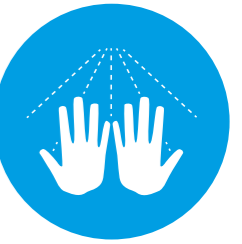

Effectiveness in 100 ml: 70 ml 2-propanol; Other ingredients: gelling agent, refatting agent, fragrance

Regulatory requirements

Biocide of product type 1 („Biocidal products for human hygiene“). Use disinfectants with care. Always read the label and product information before use.

Application: Concentration / exposure time:

Effectiveness	15 sec.	30 sec.	1 min. / 60 sec.	1,5 min. / 90 sec.	2 min. / 120 sec.

Alcohol-based surface disinfection

Medizid® Rapid+

High-performance, ready-to-use rapid disinfectant for alcohol-resistant surfaces and objects

Product type

Medizid® Rapid+ is a ready-to-use, alcohol-based disinfectant for application using a cloth, with broad-spectrum effectiveness for the disinfection of alcohol-resistant surfaces in healthcare facilities. Ideal for rapid disinfection between treatments and procedures, especially when practical situations mean contact times need to be kept short.

Applications

For the rapid disinfection of alcohol-resistant surfaces in the patient's immediate environment in hospitals, general practice, outpatient units, nursing homes and manufacturing.

Usage

Remove visible soiling before performing disinfection. Wet the surfaces completely with the solution and use a hygienic, clean disposable cloth to distribute the disinfectant solution as required. Remember to observe the contact times as necessary. For professional use only. Not suitable for the disinfection of invasive medical devices. Test material compatibility on an unobtrusive portion if necessary.

Product properties

- aldehyde-free
- effectiveness:
 - effective bactericide (incl. MRSA), yeasticide
 - effective fungicide
 - effective mycobactericide
 - effective virucide
- listed by the German Association for Applied Hygiene (VAH)

Shelf life

3 years (see label). Shelf life after breaking seal: 28 days. Keep containers tightly closed. Use moist wipes only. Warehousing and storage under standard storage conditions (protect from moisture, direct sunlight, heat and frost).

Composition

Active substances in 100 g:
63,5 g Ethanol

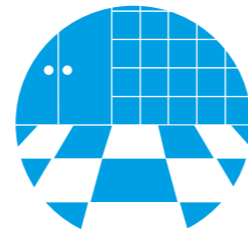

Regulatory requirements

Medizid® Rapid+ disinfectant wipes

Disinfectant wipes for alcohol-resistant surfaces on medical devices

Product type

Medizid® Rapid+ is a ready-to-use, alcohol-based disinfectant for application using a cloth, with broad-spectrum effectiveness for the disinfection of alcohol-resistant surfaces in healthcare facilities. Ideal for rapid disinfection between treatments and procedures, especially when practical situations mean contact times need to be kept short.

Applications

For the rapid disinfection of alcohol-resistant surfaces in the patient's immediate environment in hospitals, general practice, outpatient units, nursing homes, manufacturing and public organisations.

Usage

Remove visible soiling before performing disinfection. Then wipe down the surfaces carefully with the impregnated cloth. Ensure complete wetting of the surface and observe the contact times as necessary. For professional use only. Not suitable for the disinfection of invasive medical devices. Test material compatibility on an unobtrusive portion if necessary.

Product properties

- aldehyde-free
- effective bactericide, yeasticide, mycobactericide, fungicide, virucide
- effective against MRSA
- listed by the German Association for Applied Hygiene (VAH)

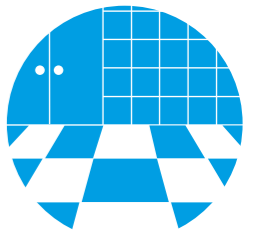

Shelf life

Medizid® Rapid QF Flowpack

Alcohol-based hygiene wipes for the disinfection of medical device surfaces and objects

Product type

Medizid® Rapid QF Flowpack is impregnated with the very fast-acting fluid from the alcohol-based product Medizid® Rapid. The hygiene wipes are therefore a good choice for disinfecting medical device surfaces and objects used in medical applications, and in the patient's immediate environment between treatments and interventions.

Applications

For all alcohol-resistant medical devices, surfaces and objects, especially for device surfaces/objects in the patient's immediate environment in hospitals, general practice, outpatient units and nursing units.

Usage

Medizid® Rapid QF disinfectant wipes (flowpack) are ready-to-use. The surfaces and objects to be disinfected are wiped down with the Medizid® Rapid wipe, ensuring that the surface/object is wetted thoroughly. Exercise care with alcohol-susceptible materials. Do not use for the disinfection of invasive devices.

Product properties

- aldehyde-free
- effective bactericide, yeasticide, mycobactericide and fungicide, "Limited virucide PLUS" rating
- effective against MRSA
- listed by the German Association for Applied Hygiene (VAH)

Shelf life

3 years (see label). Shelf life after breaking seal: 28 days. Keep containers tightly closed. Use moist wipes only. Warehousing and storage under standard storage conditions (protect from moisture, direct sunlight, heat and frost).

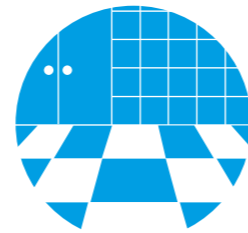

Composition

Active substances in 100 g: 50 g ethanol

Regulatory requirements

Medizid® Rapid QF Flowpack is not a medicinal product and is subject to biocide legislation. Use biocides safely. Always read the label and product information before use. Type 1 biocide product ("biocide products for human hygiene"), biocide reg. no. N-75574.

Alcohol-free surface disinfection

Medizid® AF+

Concentrate for surface disinfection

Product type

Medizid® AF+ is a liquid, aldehyde- and alcohol-free concentrate for the disinfection of surfaces not resistant to alcohol on medical devices, and especially device surfaces and objects in the patient's immediate environment.

Applications

Ideal for areas with heavy soiling or odours, such as operating theatre tables, bed frames and surfaces in daily use in medical facilities, manufacturing and public organisations. Also suitable for surfaces not resistant to alcohol. Test material compatibility on an unobtrusive portion if necessary.

Usage

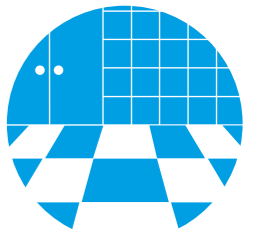

Remove visible soiling before disinfection; wet surfaces completely and keep surfaces moist during the entire contact time. Use dosing aids and follow instructions; example of use: 10 l of a 1% solution = 9.9 l water + 100 ml Medizid® AF+.

Product properties

- alcohol-free concentrate
- aldehyde-free
- effective bactericide, yeasticide, tuberculocide, "Limited virucide PLUS" rating
- high material compatibility
- listed by the German Association for Applied Hygiene (VAH)

Medizid® Alpha+

Alcohol-free, ready-to-use disinfection for wipe-resistant surfaces on medical devices

Product type

Medizid® Alpha+ is a ready-to-use, aldehyde- and alcohol-free spray and wipe disinfectant solution with broad-spectrum effectiveness for the disinfection of surfaces in healthcare facilities.

Applications

For healthcare facilities, sanitary/bathroom use and nursing homes.

Usage

Remove visible soiling before performing disinfection. Wet the surfaces completely with the solution and use a hygienic, clean disposable cloth to distribute the disinfectant solution as required. Keep the surface moist during the entire contact time. Wipe away residues of the disinfectant after the expiry of the contact time, either with a cloth soaked in water (at least drinking water quality) or a hygienically clean cloth. For professional use only. Always use undiluted.

Product properties

- Comprehensive bactericide and yeasticide
- "Limited virucide PLUS" rating
- Material compatibility for surfaces sensitive to alcohol
- Listed by the German Association for Applied Hygiene (VAH)

Shelf life

3 years (see label). Shelf life after breaking seal: 12 months. Keep container tightly closed. Warehousing and storage under standard storage conditions (protect from moisture, direct sunlight, heat and frost).

Medizid® Alpha+ Flowpack

Surface disinfection

Product type

Medizid® Alpha+ Flowpack are ready-to-use, aldehyde- and alcohol-free hygiene wipes with a broad-based mechanism of action for the disinfection of surfaces not resistant to alcohol, medical devices and objects in healthcare facilities. Ideal when contact times need to be kept short for practical reasons.

Applications

Suitable for the rapid disinfection of all surfaces and medical devices not resistant to alcohol in the patient's immediate environment in hospitals, general practice, outpatient units and nursing homes, as well as the food industry, manufacturing and public organisations. Test material compatibility on an unobtrusive portion if necessary. Not for use in the final disinfection of semi-critical and invasive medical devices

Usage

Remove visible soiling before performing disinfection. Then wipe down the surfaces carefully with the impregnated cloth. Ensure wetting is complete and keep moist during the entire contact time.

Product properties

- comprehensive bactericide and yeasticide
- "Limited virucide PLUS" rating
- material compatibility for surfaces sensitive to alcohol
- wipes made from 100% biodegradable cellulose fibres
- listed by the German Association for Applied Hygiene (VAH)

Instrusol® AF +

Instrument disinfection for manual reprocessing

Product type

Instrusol® AF + is a highly effective instrument disinfectant for the reprocessing of industry-standard medical and surgical instruments, as well as thermally sensitive anaesthetic accessories and rigid endoscopes, either by an immersion method or in an ultrasonic bath.

Applications

For all applications where medical instruments are reprocessed by the use of immersion procedures and in ultrasonic cleaning systems.

Usage

Always follow the usage instructions and reprocessing guidelines offered by instrument manufacturers; note in particular information about the preparatory steps to take, cleaning and disinfection, rinsing and drying, and storage.

Product properties

- high-performance concentrate
- aldehyde- and phenol-free
- bactericide, yeasticide, tuberculocide
- "Limited virucide" rating
- listed by the German Association for Applied Hygiene (VAH)

Shelf life

3 years (see label). Shelf life after breaking seal: 12 days. Keep container tightly closed. Warehousing and storage under standard storage conditions (protect from moisture, direct sunlight, heat and frost).

Composition

Active substances in 100 g: 5 g alkyl dimethyl ethyl ammonium ethyl sulphate, 1 g polyhexamethylene biguanide hydrochloride, 1.8 g cocospropylene guanidinium diacetate

Regulatory requirements

Class IIb medical device

Contact time

Activities	5 min	15 min	30 min	60 min
Bactericide, yeasticide (as per VAH) (high load)		4.0 %	3.0 %	2.0 %
Tuberculocide (as per DGHM 2001) (high load)		4.0 %	3.0 %	2.0 %
Virucidal activity:				
Rotavirus (DVV/RKI) (high load)	2.0 %			
SV 40 (DVV/RKI)			3.0 %	
BVDV/Vaccinia (DVV/RKI) (no load)		1.0 %		

Reprocessing instructions

Immersion method

Immerse instruments after use. All surfaces and cavities must be covered and/or filled. Remove instruments, rinse thoroughly with water and dry.

Ultrasonic bath

The prescribed frequency range and the prescribed disinfection duration must be maintained. Water temperatures above 45 °C are to be avoided.

Product changeover

Instrusol® AF + is not compatible with disinfectant products containing aldehyde. On first use and when changing products, instruments and accessories, baths, reprocessing equipment and any application aids used must be thoroughly cleaned and rinsed off.

Instrusol® AF + ready-to-use solution is protein-resistant and can be used more than once if required. The ready-to-use solution is usable for up to 7 days if instruments immersed are properly pre-cleaned. If clouding or visible contamination occurs, we recommend renewing the ready-to-use solution earlier.

Notes

As a ready-to-use solution, Instrusol® AF + is not a hazardous formulation according to the German Ordinance on Hazardous Substances. The ready-to-use solution is not caustic. However, we do recommend taking the normal safety precautions for handling chemicals and wearing the usual kinds of protective clothing.

Gentle Med® cream lotion (W/O)

Skin protection balsam with panthenol and vitamin E

Features

Cream lotion with an advanced skincare formula to protect and promote the regeneration of extremely stressed skin. The Gentle Med® cream lotion in this product has been dermatologically tested and rated "Excellent": suitable for all-over body care, it is pH skin neutral and enriched with panthenol and vitamin E. Free from silicone oil, PEG and parabens, with marigold extract.

Gentle Med® oil bath

Oil bath with natural oils

Features

Medical oil bath enriched with high-quality soya oil. Promotes the physiological regeneration of the skin. Offers relief for sensitive and dry skin. Suitable for use in showers and baths.

REF	Pack contents	Shipping unit	PZN
00992D	500 ml	12 bottles	11170260

Gentle Med®

skin cleansing and care foam

Gentle cleaning and care

Features

Fast and gentle cleaning and care of the skin, also for incontinence, patients with a stoma, and for bed-ridden patients. This skin-cleansing care foam contains moisturising and odour absorbing substances. Paraben-free. PEG-free. Silicone- and paraffin oil-free. Contains no allergenic perfumes.

Usage

To lather, hold the can (valve) down at an angle, thus ensuring that the container is completely emptied. Leave to act briefly and then wipe off with a disposable cloth. A protective film continues to care for the skin and provide a deodorising effect. Shake the can vigorously before use.

00994D	500 ml	12 bottles	11170248

Gentle Med® moist care wipes

Care wipes for normal and sensitive skin

Features

Moist care wipes with a witch hazel extract texture, based on mild, coconut oil surfactants. Gentle Med® moist care wipes are PEG-, paraben-, paraffin- and silicone-free.

Usage

Ready-to-use, high-quality care wipes for the effective, rapid and especially mild care and cleansing of soiled areas of the skin. Disposable to prevent germs spreading any further. For use without water. Please re-seal the pack carefully after removing wipes.

Everyday products – and therefore essential!

Work processes in the healthcare sector should primarily be patient-centred. For this reason, we have a comprehensive range of ward and patient supplies in our portfolio to properly meet this everyday need. From daily physical hygiene for bed-ridden patients with our care products and washing gloves, to essential items such as cotton buds, wooden tongue depressors or protective towels.

BagBath® haircare

Dry shampoo

Features

A water-free hair washing system with no rinsing. Can be used either heated up or cooled down. Contains no perfumes. Can also be used in combination with the BagBath body wash system.

Usage

Hair washing system for bed-ridden patients and people requiring care.

REF	Pack contents	Shipping unit	PZN
APO021012	100 ml	30 bottles	-

BagBath®

Disposable body wash system without water or soap

Features

The wipes in the BagBath® have a pleasant and subtle scent. Moisturising ingredients and clinically tested formulas for these ingredients work to protect the skin from irritation.

Usage

The packaging can be opened easily and then resealed, even with gloves. Wash bowls, soap, water, flannels, towels and care lotion are no longer required.

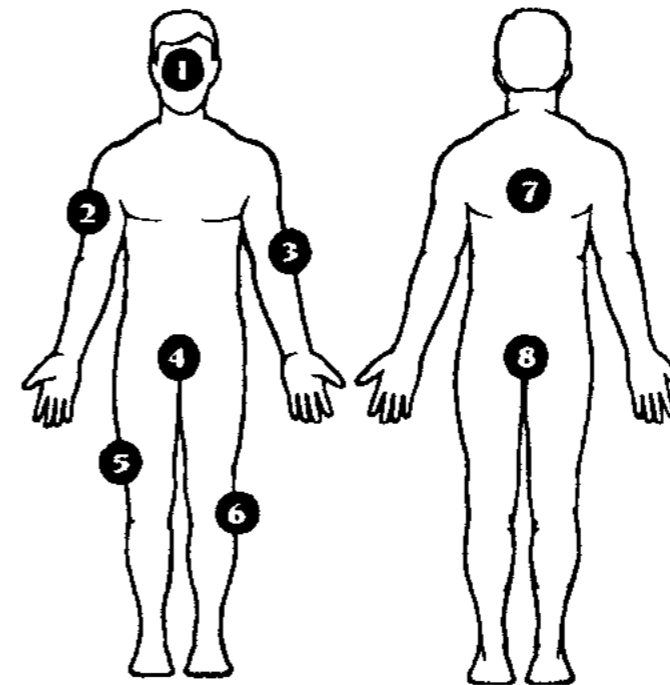

REF	Size	Pack contents	Shipping unit	PZN
2359	25 x 20 cm	8 wipes	30 packs	06149252

BagBath® enables hospitals and nursing care centres to improve the quality of skin care for their patients, and also while saving time and money.

BagBath® makes it possible to wash the body without soap, washcloths and towels in situations where there is either no bath available or it is not possible to get the patient to the bath.

All body parts are covered:

BagBath® ensures full and complete body hygiene. A pack contains 8 wipes – one for each area of the body.

Benefits for the patient:

- Avoidance of contact infections caused by traditional washing utensils such as flannels and towels.
- Prevention of cross-contamination by dispensing with reusable washing materials.
- Washing with BagBath® has fewer risks for patients who have undergone surgery, been intubated, suffered trauma or who are immobile, since there is no need to move the patient as is the case when the bed clothing becomes wet.

Special pack that can be warmed up:

→ Microwave + BagBath®

- Most patients prefer the feeling of a warm bath.
- Warmth prevents the patient losing body heat.

Special pack that can be chilled:

→ Refrigerator + BagBath®

- A refreshing and cooling effect on patients

Simple to dispose of:

→ rubbish bin

As an adisposable product, BagBath® can be disposed of with normal household waste. When washing patients who have been quarantined, internal disposal regulations must be respected.

BeeSana® Wash glove

Hygienic, disposable wash gloves

Usage

For skin cleansing and personal care. Can be used in all areas of nursing, with a particular focus on the care of the elderly and sick.

Senator Hans-Hermann Rösner-Mautby

(* 27 June 1917 in Beuthen, † 24 June 1999 in Oberaudorf)

For his services towards the establishment of the hospital in Oberaudorf, he was made honorary senator of Ludwig-Maximilian University, Munich. He was also awarded the German Federal Cross of Merit and the Bavarian Order of Merit for his entrepreneurial achievements in the healthcare sector.

SENATOR RÖSNER FOUNDATION

Touch. Help. Create opportunities.

With its wide-ranging activities and carefully targeted public relations work, the Senator Rösner Foundation collects funds for people who have fallen into financial difficulty because of cancer. Founders Peter Rösner and his wife Eveline Rösner use their foundation to support cancer research and the training of medical personnel.

As a successor to the "Hilfswerks der Klinik Bad Trissl" (Friends of Bad Trissl Hospital), the Senator Rösner Foundation can now look back on over 25 years of experience as a charitable organisation.

The following projects are currently receiving long-term support.

HEAT study

The Senator Rösner Foundation is supporting the clinical research study led by Prof. Dr. med. Dipl.-Biochem. Rolf D. Issels at Munich University Hospital with its innovative approaches to the field of pancreatic cancer; funding volume here is several hundred thousand euros.

Rapid help where it's needed most

Cancer can leave some people facing unexpected financial and social difficulties. Here, the Senator Rösner Foundation "Leben mit Krebs" (Living with Cancer) provides quick and straightforward help.

Promoting skills and professional development

The Senator Rösner Foundation takes advantage of its proximity to all the major oncological centres in Munich and Bavaria. The Foundation maintains regular contact with scientists and researchers while also providing funds for research and development.

We run to help

The charity run organised by the Senator Rösner Foundation is held under this banner, plus the patronage of FISWorld Champion Felix Neureuther, and is now well-known throughout Germany. In 2013 alone, almost 800 runners together covered the amazing distance of 6,756 km, and managed to amass a record-breaking sponsorship figure of € 105,000.

WSG-Swarovski-Wattens

SOS Kinderdörfer

A pioneering aid project that goes beyond national boundaries. Thanks to the bonds of friendship between the Rösner family and the charity president, Diana Langes-Swarovski, children and young people are helped via SOS Kinderdörfer to get through difficult life crises, including by other means than sporting development.
